ITALTHERM

**Company
Profile**

Italtherm Today

Italtherm is a brand new company. Featuring dynamicity, flexibility and innovation, Italtherm takes part in **the HTG field** both for individual and centralized CH systems. Italtherm runs its products from the R&D to the sale both on the Italian and export market.

Italtherm, thanks to its **strong know-how** and thanks to its people **long term experience** in this field, can meet everybody needs.

Italtherm core philosophy is made by a **strong and worthily** working team whose focus is both aimed to innovation technology and to tighten strong partnership.

In order to all together make a new company philosophy based on human approach as we believe that **people** are the **company core**.

**... Italtherm born
to build the future ...**

Italtherm Tomorrow

“We do not inherit the Earth from our fathers.

We borrow it from our children”

(african saying quoted by Antoine de Saint-Exupéry)

Italtherm, in terms of **environmental friendly company**, is attending new challenges which will launch us to prove our worth over the years.

We believe that we have to achieve and grant everybody welfare without affecting new generation future nor the environment one, even if people time to time are used to forgetting we are part of.

Due to that, Italtherm aims to develop a full range products capable to optimise and put together all those renewable energies like **solar and geothermal** ones with traditional fonts like gas. Everything is thought to offer high efficiency products with easy application and with the capability to comply to whatever system needs.

... No compromises.
No time to lose.
We owe it to them ...

Italtherm The structure

The headquarters, having 10,000 m² area, are located in a brand new building and in an optimal logistic position. We always put particular attention in managing **directly** and smartly each single production process phase, and in offering a direct and personalized service to our customers.

The Technical Department is the core of the company. The design of all the products and systems is made internally by the technical office, as well as their experimenting and testing is made by our R&D and Quality labs.

Production and warehouse.

A modular production structure, easy to expand, has a production

capacity of 120,000 boilers per year, that allows the maximum flexibility in terms of range and numbers. The dynamic stock management of the raw material, finished product and spares, allows direct control of inventory and results in a prompt response to the various market needs.

The commercial structure, servicing and **pre- and after-sales** support, with **exhibition area** and **training room**. The company aims to provide a service much more customer-oriented, with pre- and post-sales personalized technical consulting, through unique and direct contacts, which know and understand the various requirements, directly supporting the specific installations of complex systems and ensuring quick response.

...Italian know how ...

Italtherm R&D

The development of a new product covers a wide spectrum of issues, skills and passion.

The Customer at the centre of everything

with this philosophy, the products of today and tomorrow are developed and created.

ITALTHERM therefore constantly reserves to **Research and Development** a considerable part of its investments, both in terms of **equipment** and **human resources**.

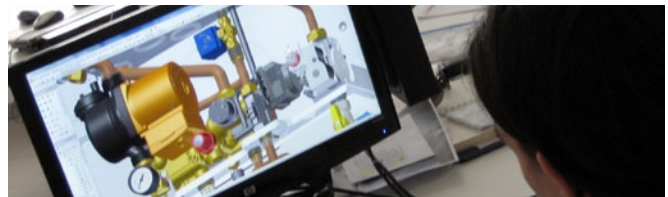

The design phase is done with a modern **3D CAD** system that allows a uniform and widely computerized management of the entire project, from the modelling of prototypes, to the co-engineering with suppliers.

Our **new laboratories** are equipped with high precision instruments. The prototypes and numerous random samples taken from production, are subjected to careful and thorough testing to ensure **reliability**, **compliance**, and the best **quality** of every item we produce.

The first fruits of Italtherm R&D: innovation and patents

The company, in view of the continuing technological evolution of products, has filed several patents for industrial inventions concerning innovative energy-efficient systems, which go also to integrate with other systems or products already on the market, optimizing the efficiency and, at the same time, simplifying the plant facilities, maximizing their applicability.

... always a step forward ...

Italtherm Products

ITALTHERM produces **domestic boilers** for both single user and centralized systems, and the relevant accessories and complementary devices.

With a wide range of products, complete, structured, technologically advanced and competitive, ITALTHERM is able to cover the different installation requirements of various international markets, from the simplest boilers to the most technologically advanced systems and innovative solutions both from the point of

... easy to install ...

... simple to use ...

view of the environment and of the comfort, such as:

- Boilers, both with **traditional** or **condensing** combustion, with wide modulation range
- Management of systems featuring **low temperature** heating, **zones** and **outdoor temperature control**
- Complete **solar systems**, solar panels, specific storage tanks and hydraulic groups
- Modules and accessories for **centralized systems**, controllers for cascade modules, heating energy counters

Every Italtherm product is made with innovative spirit, thinking to the customer's needs.
